

Collecting your Herd Inventory for Holstein Canada: DairyComp 305

As a way to make the Classification process easier and less time consuming, Holstein Canada is now receiving Herd Inventories for Non-Milk Recording Herds via email at least **one week** prior to the start of your work-unit. This will reduce the manual data entry during your classification visit, saving both the producer and the classifier time, and provides accurate information.

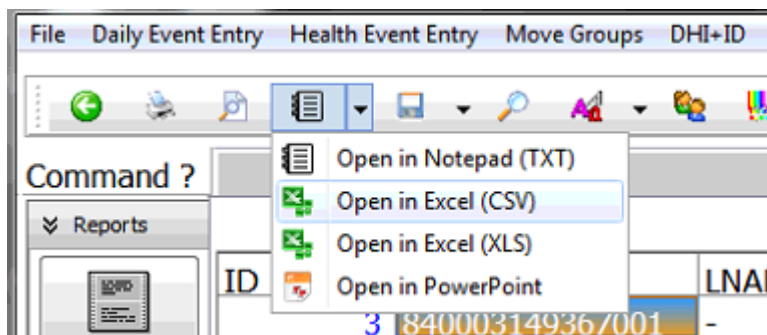

To send your herd inventory list to Holstein Canada please follow the steps outlined below.

1. In your command line type or copy & paste the following:

```
SHOW ID CREG LNAME BDAT LACT DIM FDAT RPRO STAGE RC STAT FOR LACT >0  
RC<>6
```

2. Once the list has generated, export this list as CSV file. To do this, select the notebook icon and select "Open in Excel (CSV)". Make sure the file generated has at least the following information: **Animal number, Registration Number, Birth Date, Lactation Number, and Calving date.**

3. Open the file and save it as Farm Name and Date (example: NAME_YYMMDD).
4. Attach this file to an email and send it to classification@holstein.ca

Complete these steps before each classification visit, at least one week before the classifier starts in your area.
